The **Endometriosis and Pelvic Pain Clinic** will diagnose and treat conditions relating to endometriosis, pelvic pain, perimenopause and menopause. Working through a multidisciplinary management approach helps to prevent symptoms from becoming severe or long-term.

Our GPs have undertaken further education and work closely with specialist practitioners including radiologists, gynaecologists, pelvic floor physiotherapists, exercise physiologists, dietitians, pain specialists and urologists – to help patient's reduce their pain and discomfort, and to implement the most effective treatment for your individual needs.

Once a management plan has been established, we will work together with your usual GP to continue your condition management in your regular healthcare setting.

To access the clinic, call **02 4754 1666** weekdays between **9:00am - 5:00pm**. Our reception staff will forward your information onto our Nurse Navigator, who will be in touch within two weeks of initial contact.

Alternatively, you can access our registration form via our website by clicking on the Endometriosis, Pelvic Pain, Perimenopause and Menopause Clinic tile.
